In 1963 a neurologist by the name of Howard Barrows discovered that a lay person could be trained to simulate illness and give feedback to medical students about their history and communication skills. He called this person a simulated patient and defined it as “a person who has been carefully coached to simulate an actual patient so accurately that the simulation cannot be detected by a skilled clinician. In performing the simulation, the SP presents the gestalt of the patient being simulated; not just the history, but the body language, the physical findings, and the emotional and personality characteristics as well.”

In 1972 Paula Stillman, a Pediatrician, introduced Patient Instructors (PIs) who were not simulating a patient case, but using their own normal bodies to teach learners how to perform a comprehensive and accurate physical exam using a checklist generated by clinical faculty. Today they are called Physical Examination Teaching Associates (PETA/PTA) and defined as “men or women who are specifically trained to teach, assess, and provide feedback to learners about the complete physical examination techniques (excluding pelvic, rectal, and urogenital) of the asymptomatic patient. They also address the communication skills needed to provide a comprehensive and comfortable exam in a standardized manner, while using their bodies as teaching tools in a supportive, non-threatening environment.”

Gradually, the use of the simulated patient began to grow in medical education. Educators found that simulated patients offered not only a variety of teaching opportunities for students, but also opportunities for testing student performance. Out of this testing environment grew the term “standardized patient” or “SP.” As Gayle Gliva McConvey explains, “An SP is a person trained to portray a patient scenario, or an actual patient using their own history and physical exam findings, for the instruction, assessment, or practice of communication and/or examining skills of a health care provider. In the health and medical sciences, SPs are used to provide a safe and supportive environment conducive for learning or for standardized assessments. SPs can serve as practice models, or participate in sophisticated assessment and feedback of learner’s abilities or services. The use of simulated scenarios involving humans is rapidly expanding to meet the needs of many high-risk service fields outside of human health care.”

As simulated/standardized patient methodology grew, educators felt a need to develop an organization that could foster the growth of the profession that was creating and supporting this new methodology. Thus, in 2001, the Association of Standardized Patients was formed. Since that time, our membership has grown along with the concept of standardized patients. Its use has expanded into many fields including dentistry, pharmacy, veterinary medicine, and allied health professions. Over the last decade, three simulation modalities have become intertwined - scenarios may now include SPs, task trainers and/or manikins; commonly known as “Hybrid” simulations.

**External Milestones:**

1992: The MCC (Medical Council of Canada) developed a licensing examination using SPs in the Medical Council of Canada Qualifying Examination (MCCQE) to assess knowledge, skills and attitudes essential for medical licensure in Canada prior to entry into independent clinical practice.

1998: The ECFMG (Educational Commission for Foreign Medical Graduates) introduces a SP assessment for all foreign medical graduates.

2003: The ACGME (Association Council of Graduate Medical Education) supports SPs as a module for several of the six required competencies.

2004: The United States Medical Licensing Examination (USMLE) sponsored by the Federation of State Medical Boards (FSMB) and the National Board of Medical Examiners (NBME) began Clinical Skills testing of graduating medical students in the Step 2cs.

**Initial SP Educator Conferences:**
1993: SP Trainers Calgary Conference: Calgary Ontario Canada
1997: Standardized Patient Educators Conference: Little Rock Ark,
2000: New Horizons for SP Educators: Galveston Texas
